Work Experience

Freelance
Software Engineer | July 2015 - Jan 2016

Built an investments recommendation algorithm for a startup called WealthBoost in Ruby. The algorithm compared hundreds of thousands of financial data points to yield the best results.

Established clear communication channels with the client using tools such as Slack, Trello, and InVision to improve the software development process based on agile methodologies.

Cents
Software Engineer | Jul 2014 - May 2015

Built a continuous integration process utilizing tools such as heroku, pivotal tracker, github, travis CI, and slack. This increased the speed, quality, and accountability of feature deployment.

Formulated a point system based on frequency of donations, projects created, and social interactions within the Cents app. The most engaged users were ranked on a score board to increase the reward of using our product.

Strategic Wealth Management
Financial Advisor | May 2012 - May 2014

Analyzed the fees associated with different financial instruments. Subsequently built an investment portfolio that lowered fees up to 90% for clients. This improved investment returns for existing clients and led to referrals of new clients.

Education

General Assembly
Developer Student | Feb 2014 - May 2014

Baruch College
BBA Major: Finance | Sep 2008 - May 2012
